

Drip Irrigation Technology through Wireless Sensor Network (WSN) using Message Queuing Telemetry Transport (MQTT) Protocol for Peanut (PN9) Production

> ALJAY B. SANTOS JOCELYN F. VILLAVERDE NOEL B. LINSANGAN ALEJANDRO H. BALLADO JR.

INTRODUCTION

The adaptation of Precision Agriculture (PA) technology

THE PROBLEM

downward trend average annual rate of

0.4%

harvested continuously decreased average annual rate of 2%

THE PROBLEM

Ilocos Norte produces the lowest volume.

it compose only 15.03% of area harvested out of 7,439 hectares

Statement of the problem

The main problem in growing peanut plant is the usual irrigation practice used by local farmers.

design and develop an Internet of Things (IOT) based drip irrigation (DI) technology using Raspberry Pi

control and monitor the sensor nodes using Message Queuing Telemetry Transport (MQTT) Protocol

establish peanut pilot-test farm equipped with the developed system

determine the pod yield of the drip system over manual farming

PROCEDURE

PHASE II PHASE I PHASE III Network Configuration and **Requirements Gathering Software Design** Preparation of Test Farm Design User Interface Design Raspberry Pi Selecting Appropriate **Database Design** MQTT Protocol WSN Web application Design Wireless Sensor Networks Drip Irrigation Layout **Actual Test Setup Hardware Design** IoT Drip Irrigation System • Integration of Drip using WSN through MQTT Irrigation System Testing of Software Sensor Nodes (HIGROW) Hardware Setup • Water tank/ Solar panel Statistical Analysis Peanut pod vield **PHASE IV** PHASE V

CONCEPTUAL FRAMEWO

INPUT

WIRELESS SENSOR NODE DATA INPUTS FROM PEANUT FARM & MANUAL CONTROL INPUT OF SOLENOID VALVE THROUGH MQTT

- SOIL MOISTURE
- SOLENOID VALVES

PROCESS

COMPARE READINGS OF SOIL MOISTURE TO THE THRESHOLD VALUE

READ SOLENOID VALVE STATUS FROM PRESENT SOIL MOISTURE READING

OUTPUT

DISPLAY THE CURRENT SENSOR READING AND GRAPH IN A WEB APPLICATION

POD YIELD OF PEANUT FROM BOTH DRIP SYSTEM AND MANUAL FARMING

DRIP WHEN MOISTURE IS BELOW THE SETPOINT

PAUSE DRIP WHEN MOISTURE IS EQUAL OR ABOVE THE SETPOINT

HOW DOES THE SYSTEM W

HOW DOES THE SYSTEM W

WERS

THE MQTT PROTOCOL

SAMPLE TORIELC/UTIL/MOIST1/SENTMSG'
