Development of IoT Reverse Vending Machine and its Feasibility Study to Improve Recycling

Razali Tomari

Local Issue

- Malaysia recycling rate is 17 % and current local recycling practice :
 - Dispose recycle item into recycle bin \rightarrow No Reward

Collect recycle material and sell to recycle centre → Bulk
collection, manual system to get reward

RECYCLING RATES *around the world*

DID YOU KNOW? Austria has the highest recycling rate in the world, with 63% of all waste diverted from the landfill. The United States produces 25% of the world's waste. Humans have consumed more resources in the last 50 years than in all previous history. 75% of the nearly 1 billion tons of aluminium ever produced has been recycled and is still in productive use. About 1% of the urban

SINGAPORE 59%

AUSTRALIA 30%

First-world countries such as Norway, Sweden and Germany sav highest rate of recycled PET bottles because people to recycle even with small amount ncentivise waste AUSTRIA 63% SOUTH KOREA 49% container deposit which means schem UNI attached bott e or can. there debosit rchase which is claimable once recycle TAIWAN 60%

*Most developing countries do not have a formal waste disposal system in place, but in many places there is a strong informal recycling sector. Waste pickers retrieve reusable materials from landfills and resell them to make a living, which benefits the environment and provides the poor with a source of income. In fact, the global recycling industry employs the largest amount of people in the world apart from the agriculture sector.

Current Local Solution

Empty the bottle.

Insert the bottle into the

Play and Enjoy the game.

RVM in Kuching

World Wide

Zeleno, India

P'PET, Thailand

EcoCreation, Korea

TOMRA, Norway

PROPOSED SOLUTION

From waste to Point with Interactive Display

- Custom made system & body design
- With/without registration and phone flexible user identification
- Automatic PET Bottle and Aluminum Can recognition & sorting.
- Online data transaction recording and redemption

MODULAR CONFIGURATION

ITEM NO.	PART NUMBER	
1	Chute Box	
2	Trap Door 1	
3	Trap Door 2	
4	Servo Motor	
5	PVC Pipe 100mm	
6	Ultrasonic Sensor	
7	Capacitive Sensor	
8	Inductive Sensor	
9	Laser Iransceiver	
10	IR 1	
11	IR 2	

SYSTEM BILL OF MATERIALS

RESULT

WORKING PROTOTYPE

bit.ly/RVMUTHM

SYSTEM INSTALLATION

SWCorp Office (Indoor), CYBERJAYA

MPBP Office (Outdoor), Batu Pahat

FINDINGS

SWCorp, Putrajaya

- 3 months and used by SWCorp staff .
- Machine is fully occupy with recycle waste
- Problem (1) : the recycle item stuck inside the chute route before entering
- Problem (2) : smell from the recycle items especially coffee container is quite strong and attract flies

MPBP, Batu Pahat

- 3 Months for public use.
- Able to attract user to use it for first time especially during launching and collect many waste
- Less usage in the following month
- No unpleasant smell when place outdoor but body become dusty

- RVM alone unable to attract the continuously recycling activities, it need to be pair with some promotion events, law enforcement and perhaps more interesting incentive to encourage the public to use the machine
- System can be improve upgrading the sensing mechanism to accept more type of waste, using bigger screen display, and offer interesting reward system such as free wifi or introduce recycling game.
